## **Model WLFN2 Series**

Specially designed for protecting cranes from overload and for measuring the tension of wireropes.(500kg ~ 10t/Rope)

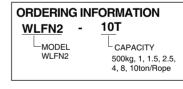

In many industrial applications the tension in were rope needs to be carefully and continaously momitored.

usually al load cells placed in series with the rope, either at a point along its length or more commonly between the end of the rope and the fixture. the problem is that such a load cell is best suited to new application where it is designed in at an early stage
